

Day 5 - Sets and Dictionary

Sets

Start [here](#)

The above link clearly explains the basic characteristics of sets in python. To better understand using sets in python like defining it and the various operations that can be performed on sets, check the page [here](#).

Dictionary

Start [here](#)

Also, the link here has more example scripts with output to help you better understand the usage of dictionary data type in python.

Differences between the different collection data types

To understand the difference between List, Tuple, Sets, and Dictionary. Also to know more about the application of these collection data types, check [here](#)

For better practice, assume you are doing pair programming with me and follow the steps I do in [this tutorial video](#). There are a few exercise questions as well in the video tutorial attached for practice. The programming skill is like Math you can learn better by practicing more. There are no shortcuts to it. All the key concepts about today's topic for data science are covered in this video.
